Review Questions

Q1? (0)

2- The speed of the processing, and by how much information could be feed into both. **Computers can store and process all type of data but calculators can do only calculations. (1)**

3- In WW1 the same use of the computer was implemented as now a- days, but now a-days computers are more efficient and a lot faster with the use of a higher technology. **The processing time and speed improved the storage capacities increased a lot but the similarities in processing all types of data and storing data. (1)**

4- At the beginning Internet was only for military uses but then collages started using them for the students all around the world as to study and communicate with each other , but as time passed by the term 'Internet' started to become one of our daily basic activities and everyone

worldwide started using it , for communication, research, and entertainment . (2)

5- Mainframe Computer is known to be the Largest data processing system and it is also big as a room sized computer, Processes million of transactions, storing huge amount of data and some Film productive companies use it to make animation which is almost life-like or could be used in big organizations or airline systems, People find it difficult to locate as it is room sized. Unlike the microcomputer which is like small in size and portable, it's a small personal computer that 1 user is mainly who uses it only, it is also based on a microprocessor ,it doesn't allow you to store a larger number of data on it, but its speed is very efficient . (2)

Discussion Questions (Q5+Q6)

5- The car and The television are one of the technologies that people now use every day, Cars are used every day to drop people to work(1), it makes our activities that we interact with anything outside our home way easier, transportation is much easier than old times where cars did not exist(1), and the Television makes people will rounded of what is going on around them from news, raw information, or studies, but it also depends on the ways of using it(1). The ability to be up-to-date since

televisions can keep you up-to- date to what's happening around you, televisions can educate and entertain your in a visual way. Cars made people able to transfer people/ stuffs from one place to another. But as for the Internet it is like a combination of everything you need, internet can also be used as a Television, which gives you everything you want on TV(1), and you are given the chance to find any specific information you want(1), you can also visit countries throw it and communicate with anyone around the world with it. So can we balance the use of these technologies? I say no, because everyone is too dependent on them for many uses and cannot just give them up; it's like a day activity use. Using the Internet you can search, communicate and share information with all around the world computers but using only your own computer won't give you the capability to do so. Using Internet you can shop, play, work, learn, and much more but without a computer system you can't access the Internet. Internet can be little distracted to people from concentrating on their tasks; the chance to be hacked is high using the Internet so you might loose some money when sensitive data are stolen. The chance of viruses to affect you computer system is high using the Internet. Using the

Internet people become lazy and less social life they do and less exercise which increase the obesity. **Over all (5)**

6- It is definitely going to be disrespectful for the original composer or the owner of the song **(1)** because it is just out there for whoever wants it without the authorized permission to have it, or without purchasing the CD, but it gives the advantage for people because they can download the songs they want without buying it, and spending money on CD's. **(1) Over all (2)**

Good and bad about downloading songs
